FEED SAFETY – CHANGE THROUGH LEARNING

Getachew Asmare National Innovation Facilitator for the feed safety and quality innovation partnership
September 2017
We can achieve change only by promoting innovative ways to learn, reflect and work together.

"I see mindset shifts being promoted by CDAIS," said Gemechu Nemie, Director of the Ethiopian Animal Feed Industry Association and a key member of the livestock feed safety and quality innovation partnership. And this is the sort of change that the CDAIS project is beginning to engender, as partners start to implement approaches that better promote innovation in agriculture, by inspiring small and simple personal revolutions. Ethiopia is one of eight CDAIS pilot countries and, within each, several ‘innovation partnerships’ have been selected. Here we see how one small step in one country is already making waves. "Milk is vital for a healthy society – and I now see a brighter future through new innovation thinking," said Tsegay Teklemariam.

Livestock – an essential national resource

Ethiopia has more livestock than any other country in Africa. The sales of meat, milk and other animal products from 57 million cattle, 29 million sheep, 29 million goats, 7 million donkeys, 2 million horses, a million camels and half a million mules make up one-quarter of national gross domestic product (GDP), 45% of agricultural GDP, and provide 16% of foreign earnings from the export of live animals, hides and skins. In addition, but more difficult to measure, is the work these animals provide, for ploughing, threshing, and transporting farmers, families and farm products to market and bringing back domestic needs.

From challenges to solutions

But the livestock sector could contribute much more to the national economy. Animal diseases, and poor-quality breeding stock and feed contribute to reduced production and sales. In response, the Ministry of Livestock and Fisheries has a vision and strategy of what can and needs to be done to develop the sector. Built on solid facts, realistic targets and priority interventions, CDAIS partners are actively supporting this – in new and innovative ways.

"I have been a dairy farmer since 2007 and now have 60 cattle. But the high cost and poor quality of animal feed, along with lack of attention or support, seriously hampers development of this sector" said Tsegay Teklemariam.
Research findings on the contamination of feeds by aflatoxin, published by International Livestock Research Institute (ILRI) scientists in 2015, prompted professionals and the feed industry to look more closely at the causes and control methods. Consequently, CDAIS partners helped to establish the ‘feed safety and quality innovation partnership’ under the auspices of a task force of the Veterinary Drug and Feed Administration and Control Authority (VDFACA). This partnership aims to overcome identified problems and ensure feed safety and quality along supply chains, with members including a wide range of stakeholders representing government ministries and authorities (including VDFACA), farmers, traders, the Ethiopian Animal Feed Industry Association, and the Ethiopian Poultry Producers and Processors Association, among others.

Key sector needs

After three days of intense discussion, solutions were identified and proposed that would overcome challenges to meeting the quality, safety and adequacy of inputs in the livestock sector. The presence of aflatoxins was confirmed as a particular and increasing issue in the milk industry, for example. The partnership agreed to develop a directive on feed risk assessments, risk management and risk communication. During the process, stakeholders analysed causes and effects around poor feed safety and quality, and developed a detailed assessment of the causes and possible solutions. Thanks to the use of new tools, they also proposed a plan of action that would lead to definite impacts in the short to medium term.

A farmer reflects…

“The CDAIS training helped me to gain new knowledge on feed safety and quality issues,” dairy farmer Tsegay Teklemariam pointed out five months after attending the capacity needs assessment. He spoke from his milk parlour on how those few days had changed his way of thinking: “We all talked together about the history of the problem, the impacts of poor feed quality, aflatoxin concerns, possible solutions, and new global issues regarding feed safety. And, thanks to the training, I came to understand the concept and benefits of agricultural innovation systems by using new ideas, how to identify challenges and solutions, and how to reach an actual action plan through working with others.” Tsegay explained that “the visioning tool was especially educational. I tried to implement it in my own activities, and envisioned going into the milk and feed processing business in the future. It helped to give me a clear direction.” Thanks to CDAIS, change is happening.

The bigger picture

A key stakeholder, the Ethiopian Animal Feed Industry Association (EAFIA), was established by feed-factory owners, private dairy farmers and feed-manufacturing cooperatives in 2008. It is a not-for-profit, non-political, democratic, voluntary and secular organisation legally registered with the Federal Ministry of Justice. EAFIA’s vision is to improve the productivity and profitability of
The ‘capacity needs assessment’ for the livestock feed safety and quality innovation partnership took place over three days, on 28–30 March 2017. It involved the active and intense input of 14 key stakeholders, including farmers and feed traders, facilitators and policy makers. It introduced new concepts and tools such as the ‘problem-and-solution tree’ and the ‘netmap’, opening participants’ eyes to different ways of seeing issues and identifying the most effective ways forward. As part of the CDAIS project, the same depth of analysis is being undertaken with every innovation partnership in every pilot country – 32 in total – yielding valuable changes around the world.

Participants at the CDAIS training and assessment workshop learnt how to use new tools and work together to prioritise problems and clearly identify possible solutions.
members and contribute to the development of Ethiopia’s livestock-feed industry. From the vantage point that EAFIA offers, its Director, Gemechu Nemie, added that the capacity needs assessment workshop and the coaching-plan and monitoring evaluation learning workshop that followed had many other positive impacts.

“Above and beyond [this], I have realised the importance of the new tools we learnt, and how they stimulated thinking on how best to approach feed safety and quality issues,” Gemechu continued. “I drew essential lessons from this, and feel that I have new skills. Thanks to CDAIS for enabling joint learning, new uses of knowledge and for creating an enabling environment for interaction. This has also inspired other members to develop legal frameworks and guidelines for risk assessment, risk management and risk communication to build a vibrant legal feed safety and assurance system. The intended legal framework will assist Ethiopia to meet international requirements, ensure human health, build consumer confidence in animal products, and legalise the often informal animal-feed business.”

What does the future hold?

“The CDAIS workshops had important impacts on my thinking. I recognised marked changes,” said Gemoecho, “and particularly in how to innovate.” Using skills gained from CDAIS, Gemechu is planning to conduct a similar capacity needs assessment survey of his own organisation to support the preparation of a five-year action plan. “I want to share knowledge and the skills gained from CDAIS.” To do so, he wants the project to offer well-documented tools and best practices, along with experiences from the many different workshops, as “these could help convince others to follow the ‘agricultural innovation systems’ as the obvious way forward.”

“I have a dream that other members of EAFIA can benefit like me.”

Gemechu Nemie Director of the Ethiopian Animal Feed Industry Association (EAFIA)

Prepared by
Getachew Asmare, National Innovation Facilitator for the feed safety and quality innovation partnership (getasi97@gmail.com, +251 9 12 69 22 05).

Feed safety and quality is one of five innovation partnerships in Ethiopia being developed as part of the CDAIS project. For more information, visit https://cdais.net/home/pilots-countries/ethiopia. CDAIS is implemented in Ethiopia by Agrinatura (represented by ICRA), FAO Ethiopia and the Ethiopian Institute of Agricultural Research (EIAR), along with other partners for other partnerships.
Feed safety and quality

Location: Addis Ababa

Aim: Developing a broadly supported legal framework and guideline for risk assessment, risk management and risk communication

Facilitators: Getachew Asmare, Gemechis Jaleta

“CDAIS is playing a paramount role in addressing the lacking legal framework for risk assessment, risk management and risk communication in the country.”

Gemechu Nemie Director of the Ethiopian Animal Feed Industry Association (EAFIA)
